ISO 14001	Certified
ISO 45001	Certified

# ABOUT US

Established in 1974 as a single bearing shop in Durban, South Africa; BMG's aggressive growth strategy has included acquisitions, supplemented by a steady organic growth discipline. BMG attracts best-of-breed talent resulting in technical expertise that differentiates BMG in the industry. Staff are truly part of the BMG family and its success.

BMG boasts an accredited in-house technical and commercial training academy which fosters a culture of staff development and career advancement; it's all about sustainability.

The net result, is a company that reliably supplies and supports 70 000 customers in 15 countries with the widest range of industrial engineered products and expert services in Africa via 105 branches.

BMG is positioned to deliver bespoke 360 degree solutions to its customers, and subsequently return on investment to its investors and shareholders. BMG plays a pivotal role in supporting the productivity and production targets of all Industrial, Manufacturing, Mining and Agricultural sectors of the economies in the countries it serves. With an enviable reputation as Africa's largest distributor, manufacturer and service provider of the highest quality engineering consumables and components; including

- Bearings & Seals
- Power Transmission Components
- Drives, Motors and Controllers
- Hydraulics, Pneumatics and Filtration
- Heavy and Light Duty Materials Handling
- Valves and Lubrication
- Fasteners, Gaskets and Tools

BMG is a level 4 BEE contributor with ISO 9001 Quality Assurance certification. Health and safety of its employees and customers is a paramount focus and the company adheres to ISO 45001. BMG is also committed to environmental care and sustainability and strictly follows the ISO 14001 charter.

As a key contributor to the Invicta Holdings stable, BMG has played a major part in Invicta's unique achievement of being rated in South Africa's Top 100 Companies for 21 consecutive years.

# FEATURES AND BENEFITS

## Benefits

Fitness for Use, Installation, Service and Maintenance		Power and Reliability	
Features	Benefits	Features	Benefits
The invertability allows for a right or left hand speed shaft.	Eliminates the use of a double extended, low speed shaft and reduces the cost for spare units where dual handling is required.	Rigid, standardized pinion shafts and housings.	Better lateral load distribution, lower noise and vibration levels.
The drive unit self-aligns from the rigid coupling to the gearbox, and from the lantern housing to the motor.	Easy installation and maintenance of the drive unit components.	Full-scale application of: <ul style="list-style-type: none"> <li>High torque geometry in low speed gear sets.</li> <li>Low noise geometry in high speed gear sets.</li> <li>Profile-controlled gas carburising.</li> <li>Protuberance hobbing of helicals and root filled grinding of bevels.</li> <li>Precision grinding with sophisticated tooth contact analysis.</li> </ul>	<ul style="list-style-type: none"> <li>Better strength/surface durability rating balance.</li> <li>Lower noise and vibration levels.</li> <li>Optimal load capacity.</li> <li>Improved tooth strength.</li> <li>Optimal transverse and lateral load distribution, lower noise and vibration levels.</li> </ul>
The drive unit is compact, robust and rigid.	Strong, reliable and long lasting for arduous conditions.	Assured oil circulation through the bearings.	Long, trouble-free working life solution.
Standard internal gears are used, for example, the P4 range of standard gears.	All standard gear components are available worldwide.	<b>Product Range Consists of Two Models:</b>	
The housing has a large surface area.	Allows for good heat transfer and easy gearbox cooling.	D C R▶▶ 23Q L H	D C R▶▶ 33Q L H
Labyrinth seals are available for low and high speed shafts.	Prevents the ingress of dirt and moisture, and protects the lip seal.		
The housing and bearing construction are designed to take overhung loads.	The gear unit supports the complete drive load.		
The housings have a horizontal split.	Easy to open for inspection and on-the-spot service.		
The inspection covers are easy to remove.	Quick and easy inspection without oil drainage.		
Identical two and three stage housings are used for the top and the bottom.	Reduces costs and improves availability.		
Drive units can be mounted onto a skid plate.	Allows for easy transportation on site.		

## The Gear Unit

The invertible Hansen unit is available in a horizontal right angle, two or three stage configuration.

The Invertible gear unit alleviates the past requirement of separate drives for the left and right hand orientation of the gearbox drives on multiple drive conveyors. This innovative gearbox can be inverted for either left or right handed handling. As a result the reduction in the number of the spare gearboxes held in stock for possible breakdowns leads to significant cost and space savings.

## Coding

R 1 2 3 3 Q 4 - 5 6 7 - 8

### 1: Low Speed Shaft Type

D: Centerline split gear unit, solid low speed shaft.

L: Centerline split gear unit, hollow low speed shaft.

### 2: Gearbox Size

C: Size 'C' Hansen I4 gearbox

H: Size 'H' Hansen I4 gearbox

### 3: Number of Stages

2: Two stage gearing

3: Three stage gearing

### 4: Additional Executions

:: No lantern

K: Lantern

### 5: High Speed Shaft Extension

C: Right angle

K: Inverted right angle (inverted internals)

### 6: Low speed Shaft Extension

L: Low speed - left

R: Low speed - right

T: Low speed with two extensions

### 7: Low Speed Shaft Type

N: Standard solid shaft

D: Hollow shaft for shrink disc connection

K: Hollow shaft for keyway connection

## 8: Ratio

XYZ: Ratio  $6.3 \leq I \leq 20$  (2 stage),  $20 \leq I \leq 90$  (3 stage)

## Basic Components

Helical and spiral bevel gears are designed and rated:

- Based on AGMA, ISO and long term field experience.
- For maximum load capacity, minimum loss and quiet operation.

The rating tables in this brochure show the mechanical power ratings 'P' expressed in kW, i.e. the power in which the gear unit can transmit 10h/day, at uniform load, whereby 5 peak torques up to 200% of the nominal torque and lasting not more than 5 seconds each, are allowed.

The mechanical power ratings shown in the tables relate respective to input speeds of 1800, 1500, 1200, 1000, 900 and 750 RPM at the high speed shaft. They are also valid for full speeds which are 3% lower than the power rating and is linear to the speed. Interpolation will yield power rating values for intermediate speeds. The power rating for speeds lower than 750 RPM is based on a continuous torque rating of that speed. For input speeds exceeding 1800 RPM, please contact BMG. All geared components are manufactured from alloy steel, gas carburized, hardened and ground. The same applies to all intermediate and high speed shafts which are generally designed as pinion shafts.

## Low Speed Shafts

Standard lengths of solid and hollow shafts are shown. The diameter, length and keyway can be changed to suit the application.

## Bearings

Heavy-duty roller bearings (tapered, cylindrical or spherical). The bearing life is calculated in compliance with AGMA, ISO and renowned bearing manufacturers.

## Housing, Bearing Housings and Covers

Made from grey pearlitic Cast Iron. Designed to ensure strength and rigidity, machined to stringent specifications.

# CODING AND COMPONENTS

## Systems

### Lubrication

Mineral oils are used. Lubricants should always contain adequate EP-additives (refer to the Service Manual). Splash lubrication is standard and the gear unit housing acts as a large oil sump.

### Sealing

**Static:** In general sealing compound is used.

**Rotary:** All shafts have a dust lip oil seal. Grease purged labyrinth seals are optional.

### Cooling

Heat generated in the gear unit while running can be dissipated by:

- Natural cooling through the housing.
- Fan cooling.

One standard fan may be mounted on to the high speed shaft. Free air entry at the fan suction side should be guaranteed.

## Accessories

### Motor Lantern

To suit IEC flange motors and to accommodate both flexible and hydrodynamic (fluid) couplings.

### Base-Plates

Floor mount, swing base and skid plate.

### Torque Arm Mountings

### Rigid Flange Couplings

### Backstop

Sprags are a centrifugal lift-off type lubricated by gear unit oil, mounted for easy service access.

## Shipping Conditions

Inspection prior to shipment consists of:

- Conformance check to the acknowledgement of order.
- No-load test.

### Protection

• Painting of the outer side housing: gear units are standard provided with a quick dry enamel paint. Improved surface protection: good corrosion protection for many years in a non-aggressive atmosphere. The dry film thickness is an average of 100um (primer included). Excellent base for all kinds of special paints. These can also be applied on site after a longer period of time. Suitable to apply humidity resistant paint, if required.

**Inner Side Housing:** Oil resistant paint.

**Inner Components:** Sprayed with an anti-rust oil.

**Shaft Extensions:** Greased and projected with waxed waterproof paper and tectyl.

### Lubricants

- Units are shipped without oil.
- Grease lubrication points are factory filled.

For more information relating to storage, handling, installation, start-up and maintenance, refer to the Service Manual, which is supplied with each unit.

## Selection

### Mechanical Power Rating

$$P \geq P_a \times SF \quad \text{or} \quad P \geq P_m \times SF$$

### Where:

$P_a$  = Absorbed power (kW).

$P_m$  = Motor or installed power (kW).

$P$  = Mechanical power rating of the gear unit according to AGMA (kW).

**SF** = Service factor specified or recommended.

Application	SF min.					
	3h / 24h		10h / 24h		24h / 24h

Reclaimer heavy-duty					2	

- Selection according to FEM 1.001 specification is available upon request.
- Special document for selection of gear units for cranes is available.
- Hoists for the transportation of people: Refer to BMG.

$P_a$  = Absorbed power.

$P_m$  = Nameplate rating of electric drive motor (or generator) at the motor (or generator) rated base speed.

The service factors 'SF' are empirical values based on AGMA, ISO specifications and our experience. They apply for 'State-of-the-art' driven machines, normal operating conditions, and for electric motors as the prime movers. If the prime motor is a multicylinder combustion motor, 0.25 has to be added to the 'SF'. For multiple drives, consider the actual load sharing. Refer to BMG for specially designed applications or special operating conditions.

For other applications not listed, contact BMG.

# GEARBOX SELECTION

## Thermal Power Ratings

$P_a \leq P_{tn} \times a \times b \times c$  No forced cooling is needed

$P_a \leq P_{tf} \times d \times b$  Use a fan on the high speed shaft

Where:

$P_a$  = Absorbed power (kW).

$P_{tn}$  = Thermal power without a fan (kW).

$P_{tf}$  = Thermal power with a fan (kW).

a, b, c, d = Thermal factors as tabulated.

## Thermal Factors Reference Data

Reduction Ratio	Ambient Temperature in °C		
	15°C - 25°C	25°C - 35°C	35°C - 45°C

# BRINGING THE WORLD'S BEST BRANDS TO YOU

In the bid to procure cutting-edge components at competitive prices, BMG is able to capitalise on long-standing relationships with leading manufacturers dedicated to excellence in design and production.

Products are imported from around the globe and brought to BMG's strategically located distribution facilities and regional service centres via the main distribution hub in Johannesburg - BMG World. A world-class facility boasting 308 000m<sup>3</sup> of fully stocked warehouse space, an accredited training facility and unlimited engineering capabilities.

## Preferred Brands:

Sumitomo Drive Technologies

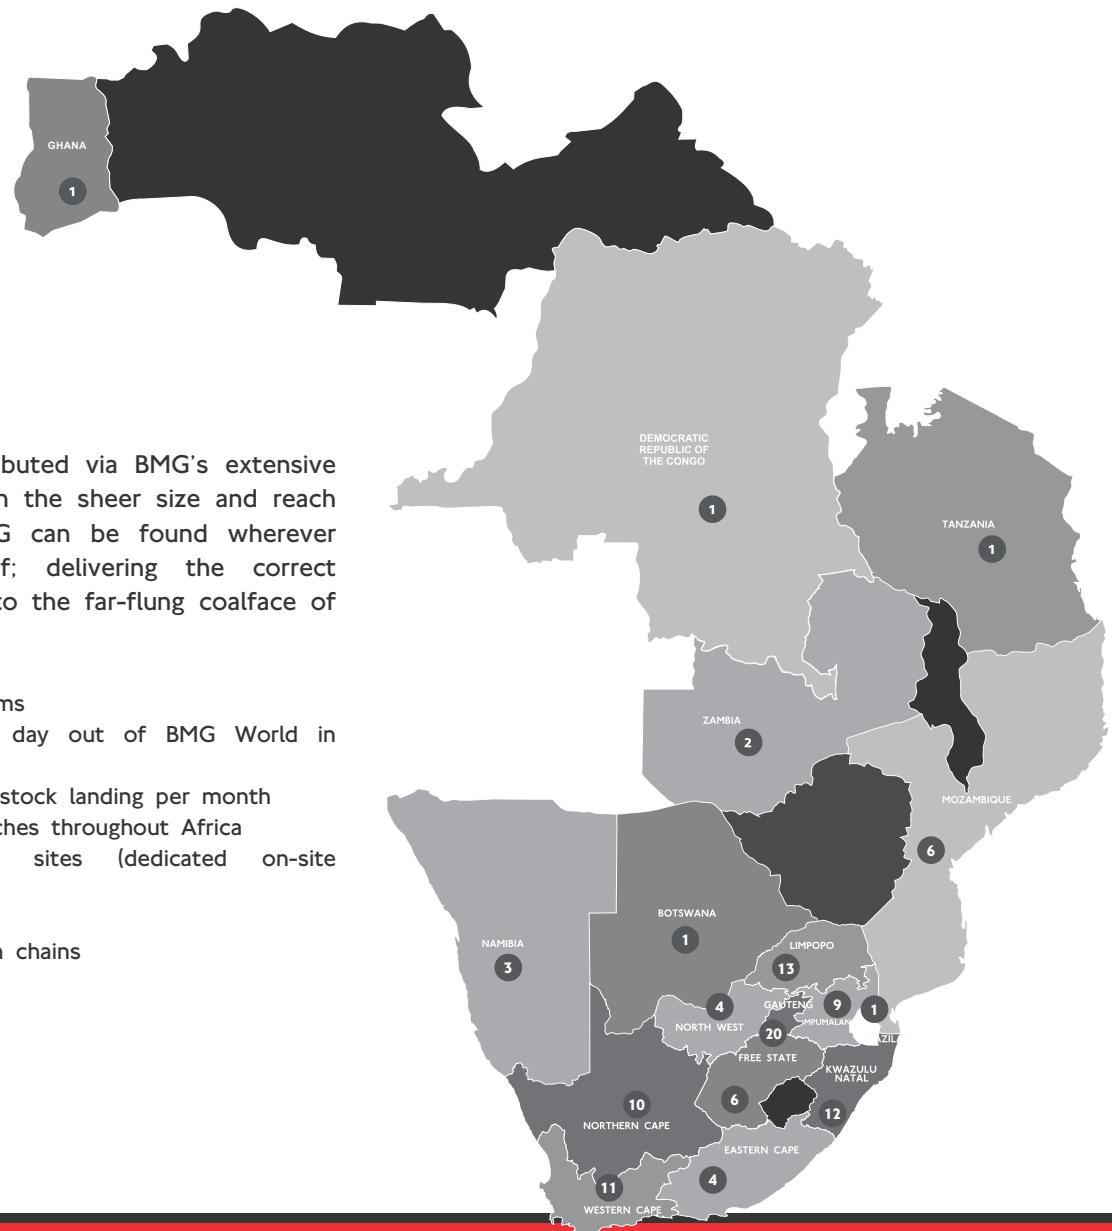

## Our Extensive Coverage Throughout Africa

**105  
BRANCHES**

Products and services are distributed via BMG's extensive distribution network. It's through the sheer size and reach of our infrastructure, that BMG can be found wherever industry has established itself; delivering the correct components at the right time, to the far-flung coalface of our customers' operations.

- Over 300 000 product line items
- Around 4 500 transfers per day out of BMG World in Johannesburg
- Over 1 000 tons of imported stock landing per month
- 105 strategically situated branches throughout Africa
- Vendor Managed Inventory sites (dedicated on-site stockholding)
- International exports
- Locally empowered distribution chains
